WHOLESALE PRICE LIST

Keystone Vegetable Seeds

Quotations for prompt Order, Immediate Shipment

—from—

CORNELI SEED COMPANY

Office and Warehouse
101 Chouteau Ave.
St. Louis, Mo.

Trial Grounds
Keystone Valley Farm
St. Louis County

St. Louis, Mo.

WHOLESALE SEEDSMEN—MISSOURI PERMIT No. 2

FEBRUARY 24, 1938

CONDITIONS OF SALE: This list cancels all previous quotations.

These prices are for prompt acceptance, subject to prior sale and our further confirmation, and to change without notice.

Prices are f. o. b. St. Louis, Mo.

NO CHARGE will be made for small cotton bags used in packing garden and flower seeds. Heavy seamless cotton bags will be charged at value and are not returnable.

TERMS: Garden and flower seeds 2 per cent for cash in 10 days, net 60 days to firms of approved credit; otherwise C. O. D. or sight draft less 2%. Other items net cash. All accounts subject to demand draft when due.

NOTICE: The total number of full bags of a species ordered for one shipment will determine the price of full bag lots of each variety within the species. Beans and Peas are considered as one species. Turnips and Rutabaga are considered as one species. **For Example:** If one bag each of ten varieties of Beans and Peas is ordered for one shipment the price for "10 bag lots" will apply.

Varieties ordered in less than bag lots will be charged at the prices listed for the quantity and variety. Prices on larger quantities upon request.

We give no warranty, express or implied as to description, quality, productiveness, or any other matter of any seeds, bulbs or plants we send out, and we will not be in any way responsible for the crop. CORNELI SEED COMPANY

MORE PROFIT FROM CORN the EASY way

ACTUAL TESTS . . .

In 26 out of 28 farm tests in 20 counties scattered over four of the largest corn-growing states, *New Improved Semesan Jr.* increased the yields $1\frac{1}{4}$ to $6\frac{1}{4}$ bushels per acre.

DU BAY

NEW IMPROVED

SEMESAN JR.

REG. U.S. PAT. OFF.

TRIPLE BENEFITS

for Corn Growers who treat seed with *New Improved* SEMESAN JR.

1. Reduces Seed Rotting

Diplodia root-rot growing on seed corn

Every corn grower knows the importance of securing a good stand of vigorous plants. But good stands, especially for early plantings or when the soil is cold and wet, are hard to get. Too many missing hills and too many hills with only one stalk usually leave a stand that is only fair. That's what cuts into your corn income year after year.

Seed decay and seedling blights seriously handicap the grower in securing good stands. Such fungi or molds as *Diplodia*, *Gibberella*, and others attack the germinating seed or the young seedling causing the seed to rot or the seedling to be stunted and weak, resulting in poor stands. These destructive fungi live on most seed and in most soils. The University of Illinois says: "No seed corn of which there is enough for farm use is entirely free from diseases. . . . The average farmer's seed is rather badly diseased. This causes a big decrease in yield which the farmer can ill afford."

Two healthy kernels (left) with four (right) in various stages of decay from seed-borne root-rots

New Improved Semesan Jr. helps to protect the seed from rotting. This efficient chemical disinfectant, dusted on the seed before planting, generally destroys the disease germs (spores) on the surface of the seed and protects it from those in the soil. Treated seed are less likely to rot even in cold, wet soils.

2. Improves Stands

New Improved Semesan Jr. usually increases stands. Its disinfecting action helps to protect the seed from rotting and the seedling from blighting. Fifty-one farm demonstrations in the Corn Belt showed

Treatment increases stands from root-rot infected seed that *New Improved Semesan Jr.* increased the stands by 5% to 15%.

Seed treatment with *New Improved Semesan Jr.* reduces the number of weak plants. While riding the cultivator, have you ever noticed how many plants were only a foot high when the others were twice as tall? There's a reason for those small plants. Most of them have been stunted during the seedling stage by the attacks of certain fungi (molds) carried on the seed and in the soil. At harvest time most of those stunted plants will be barren or will produce only nubbins. No seed treatment can grow a big ear on every stalk, but *New Improved Semesan Jr.* can reduce the number of these weak, stunted plants.

Iowa State College says: "In most cases good treatment will give a more uniform stand and also result in an increase in yield ranging from 1 to 15 bushels per acre, depending on (1) seasonal conditions, (2) time of planting, and (3) condition of the seed used."

The roots (left) show how diseases destroy them. Compare them with the healthy roots (right)

3. Increases Yields

Better stands of healthier plants mean increased yields. Numerous tests on Corn Belt farms with growers' seed show that dusting the seed with *New Improved Semesan Jr.* increases the average yield about 10%. In tests on 17 farms, *New Improved Semesan Jr.* increased the yield on 15 of them. On 6 of these farms the increase ranged from 5 to 8 bushels an acre. The next year, on 26 out of 28 farms in 20 counties scattered over 4 of the largest corn-growing states, *New Improved Semesan Jr.* increased the yield $1\frac{1}{4}$ to $6\frac{1}{4}$ bushels per acre. If your untreated seed makes 50 bushels per acre, *New Improved Semesan Jr.* generally will add about 5 extra bushels—and at a cost of only $1\frac{1}{2}\epsilon$ per acre.

Treatment of heavily diseased seed increases yields as much as 21 bushels per acre

Seed treatment is advised by Experiment Stations: Illinois—" . . . the average increase in yield in the northern two-thirds of Illinois has been about 3 bushels an acre."

Iowa—"Seed Treatment Increases the Yield—Average for 9 years—4.0 bushels per acre. . . . Since soil and weather conditions cannot be predicted it is wise to use a dust treatment every year as a form of insurance."

Minnesota—"It Pays to Treat Sweet Corn Seed! . . . Seedling blight is a common and destructive disease of sweet corn in Minnesota. It is the most common cause of poor stands and low yields."

How $1\frac{1}{2}\text{¢}$ an acre buys a better corn crop!

Seed corn treatment is now recognized as one of the necessary operations in successful corn production.

ITS PURPOSE—The purpose of treating field or sweet seed corn with *New Improved Semesan Jr.* is to destroy the root-rot organisms living on the seed and to protect it from decaying under unfavorable soil conditions. It usually increases stands and yields. It will not control corn smut, wire worms, grubs, crows, moles, gophers, or similar pests.

IT MAKES EARLY PLANTING SAFER—Early planted seed corn usually produces larger yields. *New Improved Semesan Jr.*, by protecting seed corn from rotting, permits earlier planting. It helps to eliminate the loss of time and money incurred by replanting.

HOW IT IS USED—*New Improved Semesan Jr.* is a dust. It is used at the rate of two ounces for each bushel of seed. The seed and the dust are mixed together in a treater for two to three minutes. Then the seed may be stored or planted at once.

HOW IT WORKS—As soon as the seed is planted, *New Improved Semesan Jr.* throws around it a tiny, protecting cloud of gas or vapor. This vapor is harmless to the seed and seedling, but it helps to prevent the disease germs (spores) on the seed and in the soil from attacking the germinating seed and seedling. No wonder it usually increases stands and yields!

TREAT EVERY YEAR—Field or sweet corn should be treated with *New Improved Semesan Jr.* every year because soil and weather conditions cannot be predicted. Even high-grade seed corn usually benefits from seed treatment.

LOW COST $1\frac{1}{2}\text{¢}$ PER ACRE—One pound of *New Improved Semesan Jr.* treats eight bushels of seed and costs one dollar. At the usual planting rate the cost of treatment per acre is only $1\frac{1}{2}\text{c}$.

UNIVERSITY OF ILLINOIS SAYS—"One of the best disinfectants for seed corn now on the market is *New Improved Semesan Jr.*, the active ingredient of which is ethyl mercury phosphate."

TREATING EQUIPMENT

The only treating equipment required for small quantities of seed is a discarded 40-quart milk can, an old butter-churn or similar container. Larger quantities can be treated in a rotary drum such as illustrated below.

This effective duster can be made from a 30-gallon oil drum at a cost of \$2 to \$5. Write for free Blue Print.
